

## The North Dakota State Departments of Public Instruction and Human Services and North Dakota Center for Distance Education are using Agilix Dawn to transform early childhood education PD!

With the introduction of new early childhood standards for early childhood educators in North Dakota, the Department of Public Instruction (DPI) and Department of Human Services (DHS) secured a grant that allowed them to create online early childhood training that supported the state's early childhood professional development needs.

Kelli Odden, a professor at Mayville University with 26 years of experience in education, headed up the project. In addition to ensuring that the professional development created met the state's new standards, **Kelli wanted to make sure that the courses would be accessible and affordable for learners.** She reached out to the North Dakota Center for

Distance Education (NDCDE), which has run North Dakota's online high school program for almost 30 years, to collaborate in finding a flexible and convenient online solution. Because their targeted population is spread out across the state—with many in highly-rural areas—and includes a broad range of ages, experience, and vocations, Kelli and the NDCDE wanted to find a solution that would facilitate interaction without requiring the time, cost, and travel of face-to-face training.

*We were trying to figure out how to reach these individuals without having them ... drive two hours, three hours.*

- Kelli Odden, Associate Professor of Education, Mayville State University

An online solution seemed necessary, but a traditional LMS was too complicated for their needs, and Kelli didn't want her learners to be tied to a desktop or laptop.

## Dawn is flexible, convenient, and easy to use

John Struchynski, the Technical Director of the NDCDE, had heard of Dawn's mobile-first and video-centric PD solution from his colleague who attended the product launch co-hosted by [Tom VanderArk and Getting Smart](#) at iNACOL. The NDCDE has been a longtime partner of Agilix and uses the Buzz learning platform to host several hundred virtual courses in their online high school throughout North Dakota and around the county, so he was familiar with our work and thought Dawn might offer the convenience and flexibility that they needed.

*This is super easy for this audience to get ... It's all about giving these students an additional opportunity and making it convenient for them.*

- John Struchynski, Technical Director of the NDCDE

John set up their Dawn site and handed it off to Kelli and her curriculum partner, Katie Larson, to begin building and importing their curriculum, launching in the first week of September, 2019. Given the budget and previous responses to similar trainings, Kelli and her team set a goal of getting 40-50 enrollments. To their delight, those expectations were far surpassed, with enrollments approaching 1,000 in the first two months!

*It was launched the first week of September and it's just ... like ... exploding!*

- Kelli Odden, Associate Professor of Education, Mayville State University

## Next steps for the program

This level of success required quick adjustments by the entire team and collaboration with Agilix support and development, but they were able to scale seamlessly and meet the demand. Kelli and her team are ecstatic with the success and recommend maintaining and expanding the project. They are proud to be helping so many educators get the training and certification they need, and happy to have found an easy-to-use, flexible, and convenient technology solution that resonates with their audience.

*It's been very positive ... It's working well ... It's easy to sign up ... They're able to navigate it easily.*

- Kelli Odden, Associate Professor of Education, Mayville State University

We are proud to call them our partners and look forward to seeing what more we can do together!

## Praise from students in the program

★★★★★

*I love that there is an online option for this! I would otherwise have to travel to get all this wonderful information!*

★★★★★

*Out of all the online training I have done in the last year, I think these courses have been the best yet!! Nothing bad to say.*
